

Kindai University

Kindai University was founded in 1925. Now one of Japan's largest universities, it has six campuses in western Japan and boasts research facilities across the nation – from Hokkaido in the north to Kagoshima in the south. Currently, Kindai University comprises 14 faculties with 48 departments, 11 graduate schools, a law school, 17 research facilities, two junior colleges, 18 associated primary and secondary schools, and two hospitals. The university has over 30,000 students and more than 500,000 alumni.

We offers learning for the real world – a focus that puts our research programs at the international forefront of addressing some of today's most complex issues.

- Aquaculture Research Institute: In 2002, we successfully completed the world's first full-cycle breeding program for Bluefin tuna.
- Atomic Energy Research Institute: Established in 1960 for atomic energy research and education, the Institute owns one of the only two university-operated reactors in Japan.
- Graduate School of Science and Engineering Research Major in Innovative Engineering (Monodukuiri): We grow up students who acquire manufacturing skills in order to hand the technologies to the next generation.

HOSOI Yoshihiko
President
